

## Over-voltage Protection Thyristor

#### Description

DO-214AA P Series solid state protection thyristor protect telecommunications equipment such as modems, line cards, fax machines, and other CPE.

P Series devices are used to enable equipment to meet various regulatory requirements including GR 1089, ITU K.20, K.21 and K.45, IEC 60950, UL 60950, and TIA-968 (formerly known as FCC Part 68).

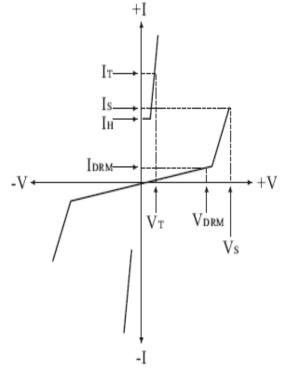

Compared to surge suppression using other technologies, P Series devices offer absolute surge protection regardless of the surge current available and the rate of applied voltage (dv/dt). P Series devices:

- Cannot be damaged by voltage
- Eliminate hysteresis and heat dissipation typically found with clamping devices
- Eliminate voltage overshoot caused by fast-rising transients
- Are non-degenerative
- Will not fatigu
- · Have low capacitance, making them ideal for high-speed transmission equipment

#### **Electrical Parameters**

Parameter	Definition	
<b>C</b> 0	<b>Off-state Capacitance</b> — typical capacitance	
	measured in off state	
di/dt	Rate of Rise of Current — maximum rated value of	
	the acceptable rate of rise in current over time	
Is	Switching Current — maximum current required to	
	switch to on state	
<b>I</b> DRM	<b>Leakage Current</b> — maximum peak off-state current	
	measured at VDRM	
$\mathbf{I}^{\mathrm{H}}$	Holding Current — minimum current required to	
	maintain on state	
<b>I</b> PP	Peak Pulse Current — maximum rated peak impulse	
	current	-V
IT	<b>On-state Current</b> — maximum rated continuous	r
	on-state current	/
<b>T</b> TSM	Peak One-cycle Surge Current — maximum rated	/
	one-cycle AC current	/
VS	Switching Voltage — maximum voltage prior to	
	switching to on state	
<b>V</b> DRM	Peak Off-state Voltage - maximum voltage that can	
	be applied while maintaining off state	
VF	On-state Forward Voltage — maximum forward	
	voltage measured at rated on-state current	
Ϋ	<b>On-state Voltage</b> — maximum voltage measured at	
	rated on-state current

\* For surge ratings, see table below.

Notes:

• All measurements are made at an ambient temperature of 25°C. IPP applies to -40°C through +85°C temperature range.

• Off-state capacitance (Co) is measured at 1 MHz with a 2 V bias and is typical value.
